

## GPS navigation files for Celtic Coastal 2016

**No promises that these files will get you round without effort. In particular you should make sure you know where the information controls and commercial control are located. The .tcx files may or may not be helpful in this respect depending on the GPS device you use.**

Track files are **out** bound to the Apple Tree Café control near Lands End and **back** for the return route:

Coastal2016OutTr.gpx

Coastal2016BackTR.gpx

These should be useable on any modern bike GPS and can also be used to build your own custom version by loading into desktop or web based GPS editors or ride planners.

Two reduced files are also included for old Garmins that can't take tracks with over 500 points:

Coastal2016Out499.gpx

Coastal2016Back499.gpx

Also **out** and **back** in .tcx format. These have the positions of the Information controls and commercial control recorded in them and these points may appear on some Garmin Edge models that accept .tcx. On some Garmin models you may find using .tcx has other less desirable results such as showing you racing against a virtual partner.

Coastal2016Out.tcx

Coastal2016Back.tcx
